

Pivot Tables

Pivot Tables calculate, summarize, and analyze data, allowing you to see comparisons, patterns, and trends. This job aid gives an overview of how to create and customize a Pivot Table and provides examples of when and how an analyst could use them.

Part 1: Create a Pivot Table

STEP 1

Open Data Set in Excel

Your data set must have one row of headers (column headings) with all the data below and contain the fields/columns you want to use in your Pivot Table. Do not upload a file with sub-column headings.

| - | А | B | С | D | E | F | G | н | | | K | |
|----|---------------|------------|------------|---------|---------|------------|--------------------------------------|------------------|------------------------------|---------------|----------------|------------|
| 1 | Report # | Start Date | Start Time | USDOT # | MC/MX # | Interstate | Carrier Name | Driver Last Name | Insp. Level | Location Code | Inspector Code | Input Date |
| 2 | 1110000451200 | 0/5/2022 | 19.42 | | | 1 | CENTRAL FREIGHT LINES INC | AGUIKKE | III - Driver-Only Inspection | 38-31 | 1110492 | 0/5/2022 |
| 3 | IN0000475027 | 12/11/2021 | 8:30 | 551940 | 215091 | 1 | STATEWIDE TRANSPORT INC | COOPER | I - Full Inspection | SR-550 | IN7334 | 12/11/2021 |
| 4 | IN0000475032 | 6/16/2022 | 7:50 | 344376 | | 1 | NEW-WAY MARKETING INC | TRAVIS | II - Walk-Around | SR-60 | IN2004 | 6/16/2022 |
| 5 | IN0000562578 | 1/24/2022 | 9:30 | 164311 | 143594 | 1 | SCHNEIDER NATIONAL BULK CARRIERS INC | GRAHAM | II - Walk-Around | SR-64 | IN8291 | 1/24/2022 |
| 6 | IN0000562597 | 6/29/2022 | 10:30 | 843883 | 370920 | 1 | BUDDY MOORE TRUCKING INC | KOLE | II - Walk-Around | SR-70 | IN7334 | 6/29/2022 |
| 7 | IN0000562601 | 12/19/2021 | 12:30 | | | 0 | JPB TRUCKING LLC | COOPER | II - Walk-Around | SR-827 | IN1478 | 12/19/2021 |

| 15 | IN0000577136 | 11/14/2021 | 7:35 | 236068 | 241655 | 1 | TAYLOR PROPANE GAS CO | TRAVIS | III - Driver-Only Inspection | SR-71 | IN6567 | 11/14/2021 |
| 16 | IN0000577141 | 10/31/2021 | 12:05 | 154237 | 138308 | 1 | KLLM INC | GRAHAM | III - Driver-Only Inspection | SR-358 | IN1478 | 10/31/2021 |

STEP 2

Insert PivotTable

Click on **any cell with text** in the data set. Doing this prompts Excel to select all the data for your Pivot Table.

From Excel's top menu bar, select **Insert**, then **PivotTable**.

| File I | lome | Inser | t Pag |
|------------|-------------------|-------|-------|
| PivotTable | Recomm PivotTa | | Table |
| | Tables | | |

STEP 3

Create PivotTable Dialogue Box

Keep the default selections shown below. Click **OK**.

| PivotTable from | n table or range | | ? | \times |
|-------------------|-------------------------------------|----|------|----------|
| Select a table or | range | | | |
| Table/Range: | Sheet1!\$A\$1:\$T\$23 | | | Î |
| Choose where yo | ou want the PivotTable to be placed | | | |
| New Works | heet | | | |
| Existing Wo | orksheet | | | |
| Location: | | | | Î |
| Choose whether | you want to analyze multiple tables | | | |
| Add this da | ita to the Data <u>M</u> odel | | | |
| | | ОК | Cano | el |

STEP 4

A New Worksheet Opens

To the right is a box called **Pivot Table Fields**. To the left is the area your Pivot Table will appear as you build it.

List of Fields: The column headings from your data set are populated here. Choose which fields to add to your Pivot Table.

B Quadrants: Arrange the fields you choose to include in your Pivot Table here. The data you place in each area defines the appearance of the Pivot Table.

Note: As you develop the Pivot Table, it will appear to the left in the spreadsheet. If you click the worksheet area outside of the Pivot Table, the PivotTable Fields box disappears. Simply click inside the Pivot Table to make the box re-appear.

STEP 5

Build the PivotTable

In the PivotTable Fields box, drag and drop the appropriate field(s) to the **Rows, Columns, Values,** and **Filters** quadrants. Data is organized by the first field in each quadrant and then subsequent fields. Moving fields among the quadrants will change the data view.

- A Rows: Start to build your report in the Rows quadrant. The field(s) you drag here are those you want to show up in each row.
- **B** Columns: The field(s) you drag to the Columns quadrant are those you want to appear across the top of the Pivot Table.
- **C** Values: The Values quadrant supports the data you want to appear in the body of the table. The Values quadrant calculates data. The field(s) you drag here are typically the ones you want to measure by adding or counting.
- Filters: This is where you add field(s) that will act as filters to your Pivot Table.

There are two options for placing fields in the quadrants.

Option 1: Drag and drop the fields into the quadrants if you want to control where to place the fields.

Option 2: Use the checkbox next to each field if you want Excel to assign the field to a quadrant.

Note: Remember to Save your PivotTable by selecting File, then Save.

Part 2: Explore the Pivot Table

Change how the data displays in the Pivot Table.

OPTION 1

Customize the Data with Filters

Apply filters to rows to view activity for a selected inspector.

- A In this Pivot Table example, click on the **Row Labels** down arrow to open the **Row Labels filter**.
- **B** There is a Select field drop down menu if there are subcategories to your rows. This allows you to filter by row or sub-category.
- **c** Uncheck the **(Select All)** checkbox. Check the box **next to an inspector** to view the types and number of inspections completed by a specific inspector(s), and then click **OK**.

OPTION 2

To Reset the Row Filter

Click on the **Row Labels** filter button to open the **Row Labels** filter.

Check the **(Select All) checkbox**, and then click **OK**.

| Count of Report # | Column Labels | Ŧ | | | | | | | | | | |
|-----------------------------|---------------|----|-----|-----|------|----|-----|-----|-----|-----|-----|-------------|
| | 2021 | | | | = 20 | 22 | | | | | | Grand Total |
| Row Labels | Cct | | Nov | Dec | Jan | | Feb | Mar | Apr | May | Jun | |
| ⊟IN5399 | - | 14 | 13 | 6 | | 1 | 2 | 21 | 13 | 13 | 16 | 99 |
| I - Full Inspection | | 3 | 6 | 2 | | 1 | 1 | 6 | 6 | 2 | 6 | 33 |
| II - Walk-Around | | 4 | 2 | 1 | | | 1 | 7 | 6 | 7 | 5 | 33 |
| III - Driver-Only Inspectio | n | 7 | 5 | 3 | | | | 8 | 1 | 4 | 5 | 33 |
| Grand Total | | 14 | 13 | 6 | | 1 | 2 | 21 | 13 | 13 | 16 | 99 |

OPTION 3

Create a Pivot Chart

In Excel's top menu bar, select Insert, and then Pivot Chart.

| File | Home | Insert | Page Layout | Formulas | Data | Review | View | Developer | Help | Acrobat | SecureZI | Р | | |
|------------|-------------------------|--------|---------------|-------------------|---|--------|--------------------|--------------------------|--|---------|--------------------|--------------------------------------|-----------|-----------------|
| PivotTable | e Recommen PivotTabl | | Pictures Shap |) 😡 🕜 es Icons | g SmartArt 3D Models Screenshot ∽ | | Add-ins Add-ins | visio Data Visualizer | <mark>ট</mark> Bing Map 품 People Gr | | ommended Charts | 0 - 0 - ∩ ≫ - 4 - 12 - ● - ⊡ - | Maps V | PivotChart ~ |

OPTION 4

Pivot Chart Options

One option is to create a Bar Graph. Select **Bar** in the dialogue box and choose a **Clustered Bar**. Then click **OK**.

Clicking on **any cell within the Pivot Table** synchronizes the Pivot Table and the Pivot Chart. When you change any filters in the Pivot Table, the Pivot Chart updates automatically. This means a change made to one is reflected in the other.

Note: Remember to save your Excel file by clicking File, then Save.

Part 3: When to use a Pivot Table

The examples below demonstrate when to use a Pivot Table and how it can assist in a given situation.

EXAMPLE 1

Bus Inspection Results

Using a Pivot Table: Shows results of annual inspections (Level VII) on school buses posted to a public website. These are used primarily by the public to address concerns with their transportation providers, as well as by schools to decide which provider to use.

Result: Shows the number of passed, failed, and total inspections for a date range.

Options: When asked for copies of failed inspections, double click on the cell of the failed inspections record, it will open a separate tab with those record details. Required inspections are available to print. The pivot table saves you from having to write a query in SNET.

| PivotTable Fields | ; | \sim | × |
|------------------------------|-----------------|------------|----|

| | Special Study | <u> </u> | |
| Rows | Σ Values | | |
| Carrier Name 🔹 | Transportation | Provider - | |
| Location Description 🔻 | | | |
| | | | |

EXAMPLE 2

Inspection Timeliness Records by Inspector

Using a Pivot Table: Helps to review the timeliness of inspection data, by identifying the inspectors and agencies/ zones that are not submitting inspection records on time.

Research issues/ask questions from there: issues with records getting in or out of SNET; connectivity issue (in rural area); records not hitting their database (saved but not submitted).

Result: Data is broken down by inspector and shows the number of days to upload for each inspection.

Options: Show counts for just one inspector: use the row labels filter and select the inspector.

- To open inspection record, double click on the number in the Sum of Days Old column, it will open a separate tab with the record details.
- Create a pivot chart to see how displaying data in a chart gives the data a different perspective.
- Can either show all agencies or select only the top number of agencies that have the highest count of late records.

| PivotTable Fields | ~ × |

| SAFETY INSPECTOR V | Sum of DAYS OLD 🔻 |
| Defer Layout Update | |

EXAMPLE 3

Fatal and Non-Fatal Crash Records by Month and Area

Using a Pivot Table: Helps to understand in which areas of the State crashes are occurring.

Result: Data is broken out by fatal and non-fatal crashes, and for each month shows the number of crashes for each area location.

Options: Show counts for just fatal records: use the row label filter and select fatal records.

- Show counts by street name instead of location area: remove Crash City from the Pivot Table Fields box, and replace it with Crash Location.
- Show counts grouped by street name instead of by fatal and non-fatal: in the rows quadrant, move Fatal below Crash Location.
- Show records for only a twoway not divided street: add Condition-Trafficway to the filters quadrant. From the new Condition-Trafficway filter option, select the Two-way, not divided street option.
- Create a pivot chart to see how displaying data in a chart gives data a different perspective.

Defer Layout Update

EXAMPLE 4

Crash Timeliness Records by Area

Using a Pivot Table: Helps to review the timeliness of inspection data by identifying the inspectors and agencies/ zones that are not submitting crash records on time.

Result: Data is broken down by agency and shows the count of crash records that were uploaded late.

Options: Sort pivot table results in descending order to group together and view the agencies with the highest number of late records. Use Row Labels, More Sort Options, Descending by Count of Days Old.

- Create a pivot chart to see how displaying data in a chart gives the data a different perspective.
- Can either show all agencies or select only the top number of agencies that have the highest count of late records.

| PivotTable Fields | ~ × |

EXAMPLE 5

Missing Fields on Inspection Reports by Agency

Γ

Using a Pivot Table: Helps to determine which agencies are not filling in the location field (county) on the inspection report. Filling in this field will auto-populate the State and Country Code.

Will need to add Last Name to the Excel file before creating the pivot table.

Result: Data is broken down by agency and shows the count of inspection records that are missing the location field.

Options: View the records for a particular agency: double click on the number in the Sum of Days Old column, it will open a separate tab with the record details.

Create a pivot chart to see how displaying data in a chart gives the data a different perspective.

| Drag fields between areas bel | |
| - | |
| ▼ Filters | ■ Columns |
| T Filters | Columns |

EXAMPLE 6

Full Inspection Summary

Using a Pivot Table: Shows the full inspection summary, including all levels of inspections plus passengercarrying inspections, Hazardous Materials (HM), and other bulk. This can help you check that inspectors are meeting the requirements to keep their HM certification.

Some inspectors will call during an inspection asking for their count to see if they need to conduct an HM inspection.

Result: Data is broken down by inspector, shows the number of inspections completed for each inspection level/type, and the number of bulk or non-bulk inspections.

Options: To organize

information by HM inspection type: use column labels filter to view only a specific inspection level and move Inspector Code under HM Inspection Type in Rows guadrant.

Turn the results table into a pivot chart, which automatically updates with changes to the pivot table.
