

## CUSTOM REPORTS – Explore Registration Data Dashboard

The FMCSA collects registration data from large truck and bus companies and other industry partners to inform FMCSA's safety-based decision making. Companies register for a USDOT number or update their company profile. In addition, companies who will transport people or goods for hire apply for FMCSA operating authority. The registration and authority data is collected and stored by FMCSA's Motor Carrier Management Information System (MCMIS) and Licensing & Insurance database (L&I).

The data used in the A&I Registration Data Dashboard includes all active motor carrier companies with USDOT numbers registered as either interstate, intrastate hazardous materials, or intrastate non-hazardous materials. Users can create customized reports by choosing options from each of the tiles and advanced filters. The number of carriers with the selected characteristics is displayed, as well as their numbers of drivers and vehicles.

### Filter Options

Filter	Description
